

DUAL TEMPERATURE METER

Twice as nice.

Designed for HVACR, the Dual-Temperature Meter measures two temperatures and calculates the difference in English or metric units. It offers technicians all the benefits of a digital thermometer in a heavy duty design.

The technology inside offers superior temperature compensation in rapidly changing environments commonly found while performing field service. It stabilizes rapidly so you can take it from the rooftop to the walk-in and get more accurate readings faster than the competition.

Dual Temperature Meter, ST4

- Read T1, T2, or T1-T2
- Rugged rubber boot
- Select °F or °C
- Min/Max and Hold
- LED indicates disengaged probe
- Great temperature compensation for fast changing environments
