

GAS DOCTOR REFRIGERANT TESTING

Maintain Peak Performance

Analyse your system for:

Non-condensables

Non-condensables are one of the major causes of the elevated high side pressures.

Composition

Through composition testing, the formula of a refrigerant can be identified.

Residue

Generally, residue results due to multiple system faults. Testing is crucial to ensure optimal system performance, particularly after a burnt out compressor has been changed.

Acid

The presence of acid within the compressor reduces the lifespan of the Unit. Checking for acid is an essential element to compressor maintenance.

Moisture

The presence of moisture within a system can result in ice formation in valves causing corrosion, damage and oxidisation.

Package Options

Select ONE test:	\$300.00*
Select TWO tests:	\$600.00*
Select THREE tests:	\$900.00*
Select FOUR tests:	\$1200.00*
Select ALL FIVE tests:	\$1250.00*

Select a minimum of
2 tests and add a bonus oil test
for just an additional \$100.00*

* Prices are net, exclusive of GST
