

From Q-motor to iQ-motor.

Quadratic. Practical. Intelligent.

The engineer's choice

ebmpapst

Same on the outside – better on the inside!

Typical of ebm-papst: we have taken a standard motor and a principle that for decades has enjoyed success in countless applications and made it more intelligent, energy-efficient and environmentally friendly! Features of the shaded-pole motor (Q-motor) such as outstanding running smoothness, low maintenance and a long service life have made asynchronous motors a standard component in small fans. Our objective was to significantly improve the inner mechanism of the Q-motor by incorporating EC technology – while keeping the exterior design identical. Conventional Q-motors can now be replaced with the new "iQ"-motors if the fans fail or if a more energy-efficient solution is required.

Exchange your old motor for 70% more efficiency

During the development of the iQ-motor, our engineers took giant strides towards reducing energy costs and fulfilling environmental protection requirements. By integrating ebm-papst EC technology, new iQ-motor now features far better efficiency and pays for itself quickly due to its significant energy-savings. The best part of all: from the outside, it is the same old fan. The identical dimensions and mounting options enable simple replacement without changes, structural modifications or any other extra effort. Axial impellers with diameters of 154 to 254 mm can be installed on the new iQ-motor just as before. The same applies to the mounting flange, the wall ring and the guard grille. Therefore, thousands of applications can easily be made more energy-efficient as part of routine maintenance, and may benefit at once from a drastic increase in efficiency, without any development effort.

The best equipment – not just in an emergency

Of course, the enormous increase in energy efficiency is not the only feature we have packed into the intelligent motor. Important electronic features ensure that the iQ-motor works even more "conscientiously" than its simple counterpart. For example, the motor has a closed loop speed control that keeps it at the same speed at all times, regardless of the diameter of the installed blade. With dirt or other interference factors, they do not cause an overload of the motor. The iQ-motor continues working at reduced speed.

One design – thousands of applications

Just one design is compatible with the entire range of impellers, from 154 to 254 mm. This makes logistics easier and keeps your development effort low. Moreover, the smallest size, the iQ 3608, is the most compact version of an EC motor for its field of application in refrigeration. It has an axial installation depth of only 74 mm, thus guaranteeing the necessary little bit of air in very tight installation spaces.

Energy-saving and quiet – throughout its long service

All variants share the low-noise performance and the famous long service life that have made this motor type so popular for so long. A critical role is played by a particularly low-friction bearing system with double ball bearings. Thus the iQ-motor can continue to yield its enormous savings potential for a very, very long time after only a brief amortisation phase. Available options include the IP54 type of protection and, of course, a standards-compliant TÜV approval.

All advantages at a glance

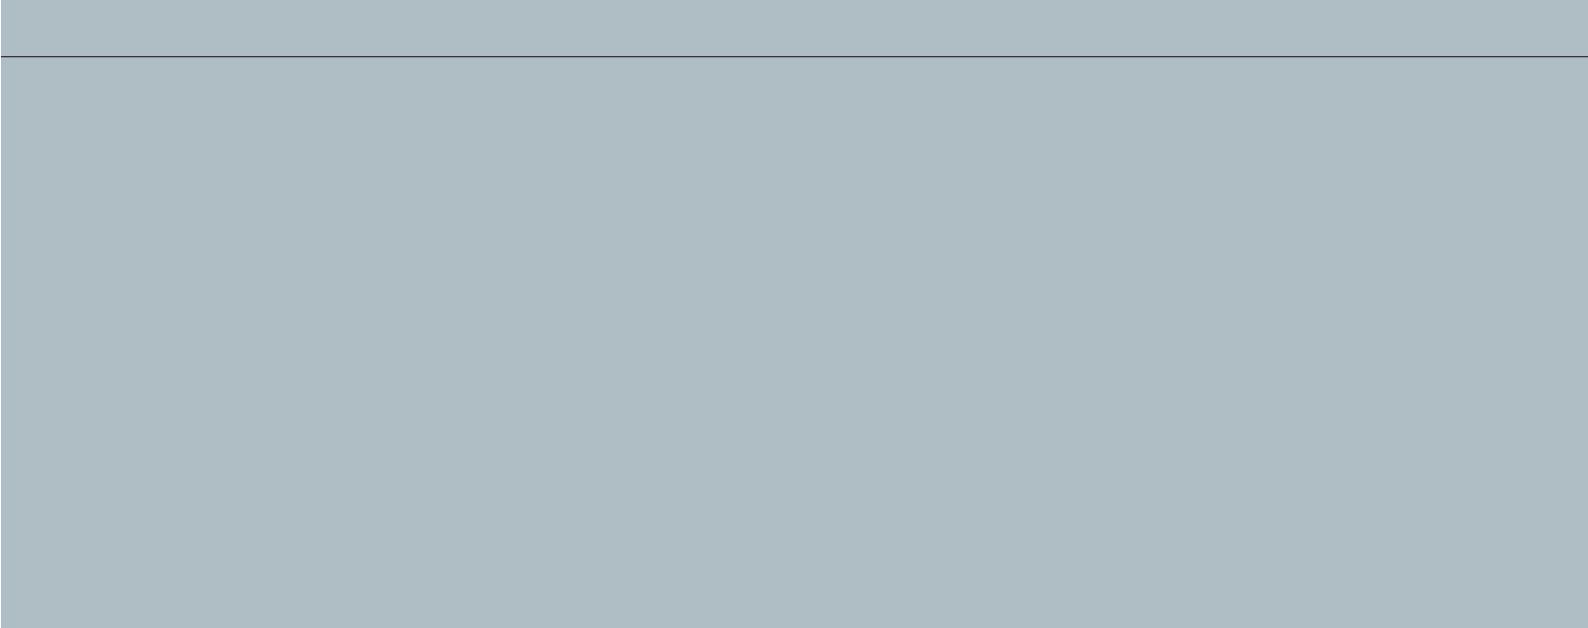

- High efficiency of up to 65 %
- Constant speed, even in the event of voltage fluctuations
- High running smoothness due to low-friction bearing system
- Intelligent electronics with n-control, overload and locked-rotor protection
- Conventional AC technology can be replaced easily
- Identical accessories and dimensions to Q-motor
- Long service life due to maintenance-free ball bearings
- One solution replaces multiple sizes of comparable AC motors

*Making our mark:
"The ultimate EC technology"*

ebmpapst

The ultimate
EC-Technology

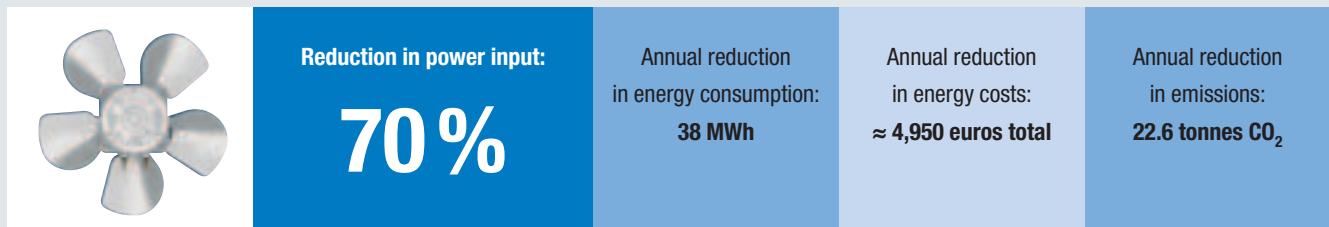

General overview of iQ-motor data

Material:	Die-cast aluminium housing	Electrical connection:	Mains cable
Direction of air flow:	Sucking or blowing (depending on axial impeller used)	Protection class:	I
Direction of rotation:	Counterclockwise, seen on shaft end	Approvals:	TÜV UL (in progress)
System of protection:	IP42 (only with horizontal shaft) optional IP54 (any shaft position)	Mounting attachment parts:	Guard grille and wall ring are attached to the projecting thread ends on the A side
Insulation class:	"H"	Axial impeller attachment:	A plastic adapter with catching peg and M4 screw is used to secure the impeller on the motor shaft
Mounting position:	Any		
Mode of operation:	Continuous operation (S1)		
Bearings:	Maintenance-free ball bearings		
Motor protection:	Via electronics		

iQ – Intelligence that pays

A quick example calculation:

A typical supermarket operates 200 AC fans with 200 mm blades (blade angle 28°) in its refrigeration units. If the shaded-pole motors were to be replaced by iQ motors, the energy consumption would be reduced by 38 megawatt hours. That is an annual saving of more than 4,950 euros* and a good 22.6 tonnes of CO₂.

*Assumptions: electricity price 0.13 euros per kWh, continuous operation 24 hours a day, 365 days a year

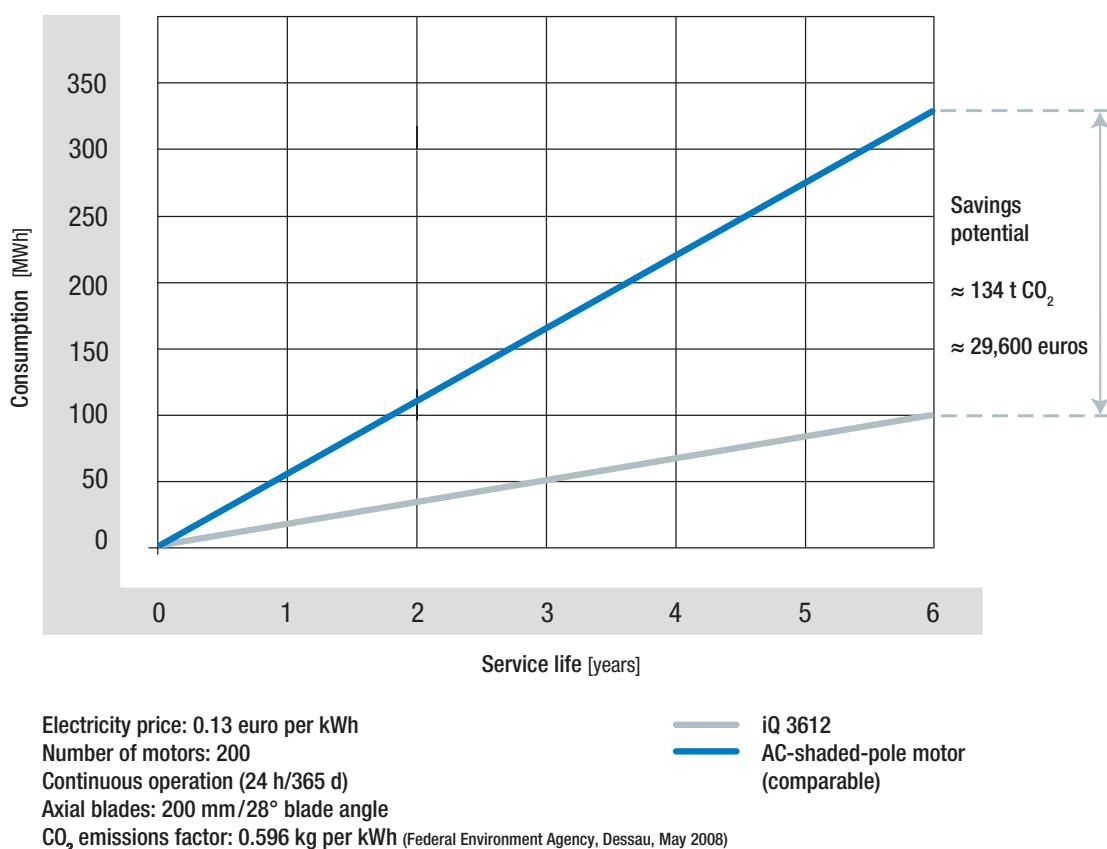

iQ-motor in energy-saving calculator

How much energy and cost could the iQ-motor save in your company? And how much CO₂ emission could be prevented? The ebm-papst energy-saving calculator on [www.eco.ebm-papst.com](http://www.eco.ebm-papst.com/calculator.php) will give you a good idea how much. Go for your energy cost calculation there and the numbers will speak for themselves!

The screenshot shows a web browser displaying the ebm-papst energy-saving calculator. The page has a blue header with the ebm-papst logo and navigation links. Below the header is a photograph of a building with a red roof. The main content area is titled "Your personal energy-saving calculator" and contains fields for "Application", "Product", "Number", "Degree of utilization", and "Electricity tariff in Cent/kWh". There are "CALCULATE" and "RESET" buttons. A note at the bottom states: "Naturally enough, this calculator can only give you a rough estimate of your actual saving potential. For an exact calculation of your specific saving potential, simply arrange for a [personal consultancy appointment](#)". On the right side, there are additional links: "Requesting info package", "Download References", "Download White paper/Info", and "Arrange for consultancy appointment".

The iQ savings potential in the long term

If you look at the figures for the iQ-motor over a prolonged period, its considerable energy-savings potential becomes especially obvious.

Technical data

	254	22	F	23	15	700
	254	28		23	23	870

Depending on the installation situation and the axial impeller used, the nominal speed of 1,300 rpm may not be reached. Due to the intelligent electronics, reliable (continuous) operation is ensured, even in this case.

The test setup with deflector simulates an extreme arrangement (between fan and condenser or heat exchanger).

The speed of 1,300 is no longer reached ...

Customers from all branches of industry – cooling and refrigeration technology, household appliance and heating engineering to name but a few – place their trust in the new iQ-motor, a simple yet ingenious drive and fan solution made by ebm-papst! Quadratic, practical and considerably more intelligent and efficient than conventional shaded-pole motors, the iQ-motor has raised the bar among “standard” motors. If you require more information, please do not hesitate to contact us. We will be happy to help.
